

Marriott Hotel

Greenville, South Carolina

A new Marriott Hotel is being constructed in the quickly growing downtown, Greenville, SC area. WEC was consulted from the beginning of the project regarding the most cost effective means to temporarily retain the proposed cuts along the perimeter streets and to provide foundation support.

WEC was hired to install soil nail walls for shoring and a combination of micropiles and auger cast piles for foundation support of the proposed hotel.

Photos to the right are of the auger cast pile installation.
